SUMMARY

Detail-oriented Data Associate proficient in Python and SQL, specializing in building end to end data processing pipelines and interactive data architectures. Proven track record of engineering functional applications, including a live deployed machine learning framework on Streamlit Cloud that models complex customer behavioral risk and evaluates quantitative churn metrics. Adept at database design, data cleaning, and transitioning raw data into production-ready user interfaces.

EDUCATION

IGNOU , MSCMACS (M.Sc in Mathematics with Application in Computer Science) — Distance Mode 01-2024 – 05-2026

B.H College , Bachelor of Science (Mathematics Hons.) — Barpeta, Assam 10-2020 – 06-2023
GPA: 7.23

M.C College , Higher Secondary — Barpeta, Assam 08-2018 – 03-2020
GPA: 6.68

St.Paul's English Medium School , High School — Barpeta, Assam 01-2017 – 03-2018
GPA: 8.28

EXPERIENCE

Data Analytics Internship(3 Months), Unified Mentor pvt.ltd. — Gurugram, Haryana 20-02-2026 – 20-05-2026
My role in this internship was to do analysis on messy datasets where i used python libraries for data cleaning with pandas, handling null values with numpy and did analysis using groupby in jupyter notebook. Further i built interactive dashboards in streamlit for data visualization and finally made the analysis reports in research paper.

PROJECTS

Customer Segmentation Churn Pattern Analytics in European Banking https://dhritikamal191.github.io/bank_churn.html
Built a user interactive dashboard in streamlit with dynamic kpis, drill downs, option selectors and sliders to visualize different trends with different segments of customer churn in European Bank. From the analysis which was done in jupyter notebook it was found that the overall churn rate was about 20%. Further, tried to find insights of customer churn distribution across customer segments. Since, churn distribution has an 80/20 imbalance, some retention strategies focusing on some particular segments were implemented to deal with customer churn.

Predictive Modeling and Risk Scoring for Bank Customer Churn <https://dhritikamal191.github.io/churn.html>
Built a customer churn prediction dashboard to find the churn rates with different data inputs. The dashboard was also integrated with model comparison. Five models were integrated to see which one gives the best accuracy and recall. Also, threshold point slider was given to track the model performances at each threshold point. XGBoost was the only model which performed the best in almost every threshold but the best came at 0.30 with accuracy 95% and recall 92%.

SKILLS

Data Analytics · Machine Learning

- **Programming Languages:** Python, CSS, Html, Java Script
- **Technologies:** A.I, Cloud Space
- **Tools:** Streamlit, Microsoft Excel, SQL, Jupyter
